

About District Nutrition Profiles:

District Nutrition Profiles (DNPs) are available for 707 districts in India. They present trends for key nutrition and health outcomes and their cross-sectoral determinants in a district. The DNPs are based on data from the National Family Health Survey (NFHS)-4 (2015-2016) and NFHS-5 (2019-2020). They are aimed primarily at district administrators, state functionaries, local leaders, and development actors working at the district-level.

What factors lead to child undernutrition?

Given the focus of India's national nutrition mission on child undernutrition, the DNPs focus on the determinants of child undernutrition (Figure on the left). Multiple determinants of suboptimal child nutrition and development contribute to the outcomes seen at the district-level. Different types of interventions can influence these determinants. Immediate determinants include inadequacies in food, health, and care for infants and young children, especially in the first two years of life. Nutrition-specific interventions such as health service delivery at the right time during pregnancy and early childhood can affect immediate determinants. Underlying and basic determinants include women's status, household food security, hygiene, and socio-economic conditions. Nutrition-sensitive interventions such as social safety nets, sanitation programs, women's empowerment, and agriculture programs can affect underlying and basic determinants.

District demographic profile, 2019

Karimganj

<p>1,000/1,000 Sex ratio (females per 1,000 males) of the total population</p>	<p>361,703 Number of women of reproductive age (15–49 yrs)</p>	<p>34,671 Total number of pregnant women registered for ANC</p>
<p>28,901 Number of live births</p>	<p>22,601 Number of institutional births</p>	<p>145,897 Total number of children under 5 yrs</p>

Source: IFPRI estimates - Headcount = Prevalence x Eligible projected population for each district in 2019. Prevalence estimates: NFHS-4 (2015-16) and NFHS-5 (2019-20) state/district factsheets and report. Projected population for 2019 (children <5yrs and women 15-49yrs) was estimated using Census 2011. Data on number of pregnant women, live births, and institutional deliveries are from HMIS. NA: unavailable/improbable data

The state of nutrition outcomes among children (<5 years)

Karimganj

Assam

2016

2020

Burden of nutrition outcomes (2020)

Indicators	No. of children (<5 yrs)
Low-birth weight	NA
Stunted	42,456
Wasted	70,030
Severely wasted	44,498
Underweight	77,179
Overweight/obesity	1,517
Anemia	84,009
Total children	145,897

Note: NA refers to data unavailable for a given round of NFHS/Census.

Points of discussion:

- What are the trends in undernutrition among children under five years of age (stunting, wasting, underweight, and anemia)?
- What are the trends in overweight/obesity among children under five years of age in the district?

The state of nutrition outcomes among women (15-49 years)

Karimganj

Assam

2016

2020

Burden of nutrition outcomes (2020)

Indicators	No. of women (15-49 yrs)
Underweight	64,383
Overweight/obesity	23,692
Hypertension	59,753
Diabetes	41,415
Anemia (non-preg)	189,894
Anemia (preg)	14,527
Total women (preg)	34,671
Total women	361,703

Note: NA refers to data unavailable for a given round of NFHS/Census.

Points of discussion:

- What are the trends in underweight and anemia among women (15-49 yrs) in the district?
- What are the trends in overweight/obesity and other nutrition-related non-communicable diseases in the district?

Note: NA refers to data unavailable for a given round of NFHS/Census.

Points of discussion:

- What are the trends in infant and young child feeding (early initiation of breastfeeding, exclusive breastfeeding, timely initiation of complementary feeding, and adequate diet)? What can be done to improve infant and young child feeding?
- What are the trends in IFA consumption among pregnant women in the district? How can the consumption be improved?
- What additional data are needed to understand diets and/or other determinants?

Underlying determinants

Note: NA refers to data unavailable for a given round of NFHS/Census.

Points of discussion:

- How can the district increase women’s literacy, and reduce early marriage, if needed?
- How does the district perform on providing drinking water and sanitation to its residents? Since sanitation and hygiene play an important role in improving nutrition outcomes, how can all aspects of sanitation be improved?
- How can programs that address underlying and basic determinants (education, poverty, gender) be strengthened?
- What additional data are needed on food systems, poverty or other underlying determinants?

Pre and during pregnancy

Delivery and postnatal

Early childhood

Note: NA refers to data unavailable for a given round of NFHS/Census.

Points of discussion:

- How does the district perform on health and nutrition interventions along the continuum of care? Does it adequately provide both prenatal and postnatal services to women of reproductive age, pregnant women, new mothers and newborns?
- How has access to health and ICDS services changed over time (food supplementation, health and nutrition education and health checkups)?
