1. Order without design: How Markets Shape Cities/ Alain Bertaud

Bertaud explains that markets provide the indispensable mechanism for cities' development. He cites the experience of cities without markets for land or labor in pre-reform China and Russia; this “urban planners' dream” created inefficiencies and waste. Drawing on five decades of urban planning experience in forty cities around the world, Bertaud links cities' productivity to the size of their labor markets; argues that the design of infrastructure and markets can complement each other; examines the spatial distribution of land prices and densities; stresses the importance of mobility and affordability; and critiques the land use regulations in a number of cities that aim at redesigning existing cities instead of just trying to alleviate clear negative externalities. Bertaud concludes by describing the new role that joint teams of urban planners and economists could play to improve the way cities are managed.

2. Journey of a Nation 75 Years of Indian Economy/ Sanjaya Baru

75 Years of Indian Economy is a part of the series Journey of a Nation. This book is written for a general audience that wishes to be informed about the nature of India's economic transformation over the past 75 years. India's economic rise as a secular, plural democracy holds great value for the entire world. 'The first two decades of the twenty-first century have witnessed a significant transformation of the economy. There was a perceptible reduction in poverty, a rapid spread of urbanization and the establishment of a globally competent services economy. India led the world in the production of several agricultural commodities. However, the manufacturing sector remained a laggard, despite the launch of a new "manufacturing strategy" by the Manmohan Singh government in 2012 that was subsequently modified and relaunched as the Make in India and Atmanirbhar Bharat programmes by the Narendra Modi government.'

4. **Global cooperation among G20 countries: Responding to the crisis and restoring growth / Michael Callaghan**

At the outbreak of the global financial crisis, 2008, the G20 was widely acknowledged as helping prevent an even more serious decline in the global economy. It helped to calm the panic in financial markets and articulate a set of possible policy options to restore global stability and growth. However, as the dual-track recovery set in, policy options for advanced economies and EMEs diverged. Within this context, this book will explore the scope for cooperation amongst the G20 and the diverging challenges and the intricate interconnectedness of policy options between advanced economies and the EMEs within the G20.

These issues range from the dynamic effects of global imbalances and the appropriate degree of financial sector regulation to questions of austerity versus growth and the lack of a comprehensive framework for managing the international monetary system. 9. Challenges and issues in Indian fiscal federalism /Naseer Ahmed

Khan

This book discusses various dimensions of Indian fiscal federalism, focusing on the current fiscal imbalances – both vertical and horizontal – and their correction. Throwing light on different angles of this subject, it presents well-researched papers, which are divided into three sections. The first section, ‘Fiscal federalism and resolving the fiscal imbalances’, includes five chapters that discuss this theme and also explain the various strategies to remove the existing imbalances in India. ‘Fiscal decentralization for high growth’ which is the second section, explains how decentralisation leads to high economic growth and showcases empirical evidence from a few Indian states that are flourishing due to this policy. The third section, ‘Emerging issues’ offers six chapters describing several existing key concerns in fiscal federalism that have a major impact on achieving India’s development goals. Including contributions from leading academics in this field, the book will be of great interest to research scholars and policy makers alike.

10. One road to riches? How state building and democratization affect Economic development/ Haakon Gjerlow

Building effective state institutions before introducing democracy is widely presumed to improve different development outcomes. Conversely, proponents of this “stateness-first” argument anticipate that democratization before state building yields poor development outcomes. In this Element, we discuss several strong assumptions that (different versions of) this argument rests upon and critically evaluate the existing evidence base. In extension, we specify various observable implications. We then subject the stateness-first argument to multiple tests, focusing on economic growth as an outcome. First, we conduct historical case studies of two countries with different institutional sequencing histories, Denmark and Greece, and assess the stateness-first argument.
